

POWERFUL AND EASY TO USE

Filter the presets

- By selecting your favorite presets, user presets or factory presets
- By displaying presets from one specific instrument only (CS-80, ARP 2600, Minimoog...)
- By reducing the number of presets to those of a specific type (Pad, Bass, Lead...)
- By choosing characteristics (aggressive, dark, complex...)

Organize presets view

- Check the name of the sound designer who made this preset and the polyphony.
- Edit information about your own user presets.

Integration

Analog Factory is a virtual instrument which means that sounds are processed within the computer.

It can be used as a stand-alone application or as a plug-in within the main sequencer programs: Steinberg Cubase, Digidesign Pro Tools, Ableton Live, Apple Logic Audio, MOTU Digital Performer, Cakewalk Sonar...

Information about the current preset

- Check the name of the sound designer who made this preset and the polyphony.
- Edit information about your own user presets.

Simple programming

Analog Factory is bringing you the most essential parameters to alter the sound. Nothing less, nothing more.

- Filter section with Cutoff and Resonance
- LFO section with Rate and Amount
- 4 key parameters differing for each preset
- ADSR envelope sliders
- Chorus and Delay mix

Presets navigation

In order to select the sound you want, the browser allows to search by criteria. Use the "Search" clickable switch to activate filters (search by instrument, by type of sounds, by style...). Then browse the presets themselves by clicking - and +.

Tweak the sound

One of the strength of Analog Factory comes from the fact that sounds are not sampled but recreated by real synthesizer engines. This gives you a chance to modify these sounds in-depth. Eight knobs and four faders give you access to the most important synthesis parameters. On top of that, two knobs allow you to add Chorus or Delay to your sound.

Snapshots

You are playing live and want to recall your favorite sounds instantly. Save them as snapshots and recall them by a simple click.

Connectivity

The Factory keyboard works with USB bus power and AC adaptor is not required. MIDI out allows you to control other devices while the pedal switches offer additional connectivity.

Universal MIDI controller

The keyboard provided in this package is optimized to work with Analog Factory. But this is also a universal MIDI controller that will allow you to control any other MIDI hardware and software.

All presets in Analog Factory have been carefully selected from the Arturia Classic Synths : minimoog V, Moog Modular V, CS-80 V, ARP2600 V, Jupiter-8V, Prophet 5 and Prophet VS. These TAE® powered sounds offer unparalleled audio quality.
