

**ABC News Radio, Washington DC & New York – Digital Audio Production,
Distribution and Broadcasting**

ABC News Radio in Washington DC is responsible for acquiring live audio feeds from a variety of public and governmental sources. As live feeds are being recorded into a Dalet workstation, editors are able edit these feeds and save changes and excerpts immediately. Edited pieces can then be sent to their facilities in New York for immediate broadcast and distribution. By using a Dalet solution, ABC News Radio is able to acquire, produce, broadcast, and distribute news in an extremely timely manner.
