

Advanced Remote Control

NEW for Fireface UFX, UCX and others

This optional tool for the Fireface UFX and UCX has a solid metal case with a main encoder dial and the following buttons:

- Recall button
- 1 x Push button on the front (freely programmable)
- 7 x button LED-equipped (freely programmable)

The Remote Control is the perfect partner for RME's X-Series interfaces and the built-in studio and live mixer TotalMix FX. The ARC turns them into a powerful and flexible monitoring controller built directly into an audio interface.

The combination of interface and remote control allows not only to control the most important monitoring functions, like volume control of the main and headphones outputs, but is a flexible and freely configurable monitoring platform for every studio or live workflow. Thanks to its programmable buttons nearly every current and upcoming feature of TotalMix can be controlled. Be it the gain control for the mic preamps, recall of mixer snapshots, the cue function for the headphones outputs or complete solo, mute and fader groups. Just assign all frequently used TotalMix functions to these buttons.

The massive Remote Control connects via a 5 m (16 ft.) cable and a special connector on the back of the host unit.

The ACR can be used with all Fireface UCX. UFX can be used from serial number 23241707 on. Older units (typically built before June 2010) require a new digital expansion board. Please contact your local distributor for details.

Programmable TotalMix FX functions (examples)

- Talkback
- Mono
- Mute (Main Out, Global)
- Phones 1/2 ...
- Dim
- Recall
- Speaker B
- External Input
