

## SETUP EXAMPLES

How to integrate TRAKTOR KONTROL X1 in your setup

TRAKTOR X1 KONTROL is suitable for any TRAKTOR setup - from a software-only setup with just a laptop to a comprehensive digital vinyl setup with TRAKTOR SCRATCH DUO / PRO.

### INTERNAL MIXER SETUP EXAMPLE

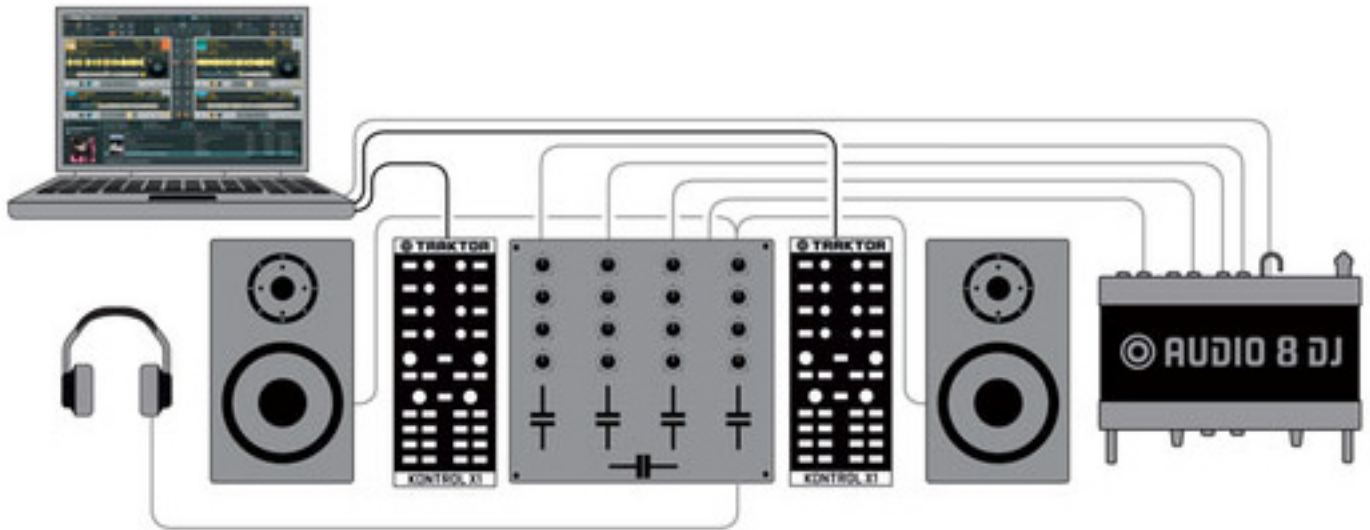

In this simple setup a laptop running TRAKTOR is connected to the X1 via USB. The AUDIO 2 DJ soundcard outputs the sound to active monitors and headphones. Perfect for on the road, the hotel, or rocking an after-party.

### EXTERNAL MIXER SETUP EXAMPLES

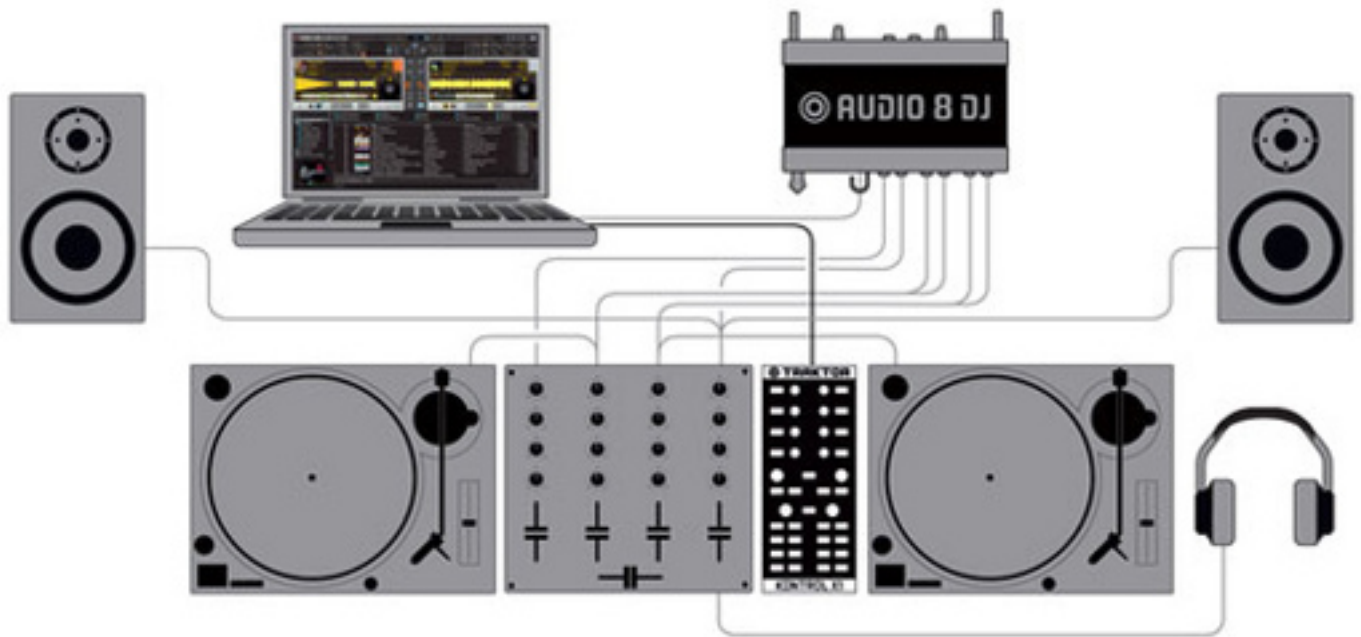

When used with a DJ mixer simply connect the X1 to a computer running TRAKTOR and use your soundcard, (here the AUDIO 4 DJ) to send the signal from the two decks to two separate mixer channels. Using the X1 for controlling TRAKTOR's decks and the external mixer for the mixing- you don't have to touch your computer at all.

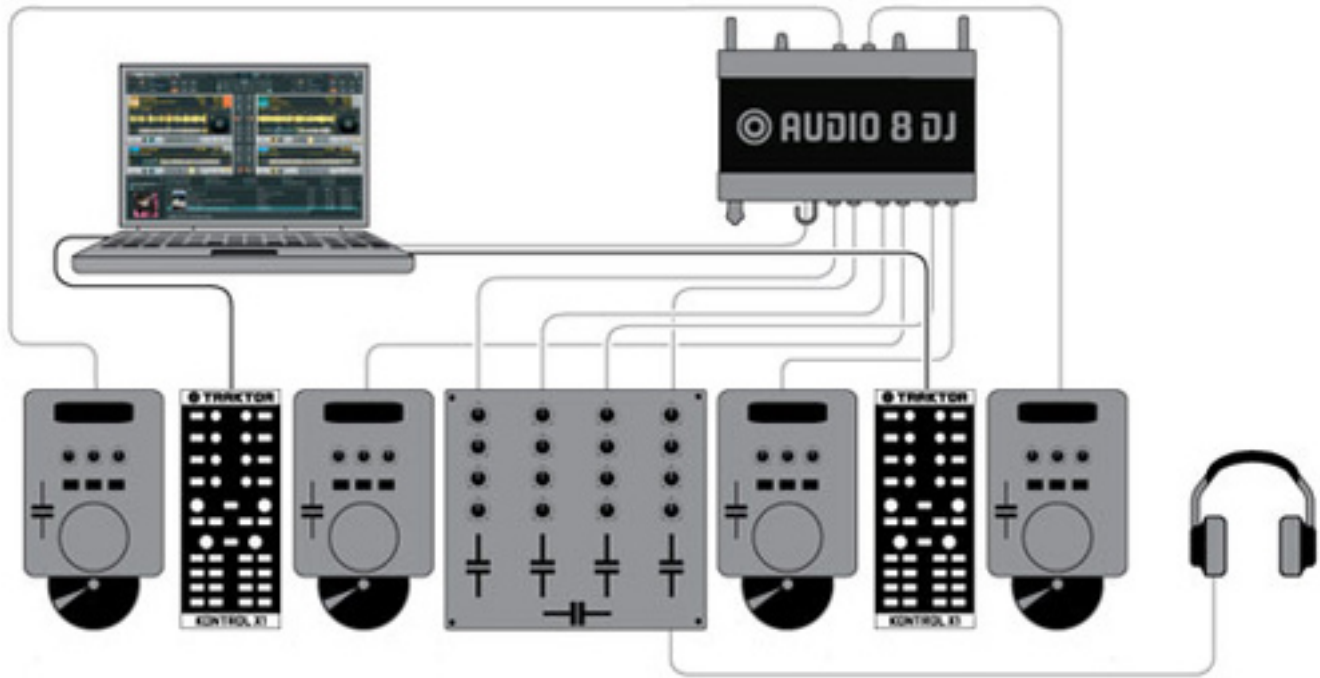

In this setup, two X1 units are used to control all four of TRAKTOR PRO's decks. The external mixer means you won't have to touch your computer. The AUDIO 8 DJ soundcard outputs the sound to 4 separate stereo mixer channels. The possibilities are endless.

#### TIMECODE-CONTROLLED SETUP EXAMPLES

The X1 is also the perfect companion for DJs who spin using vinyl controllers. Integrating into the standard DVS setup, the vinyl continues to take care of the transport functions of the DVS, while the X1 is used for finding and loading tracks, looping and effects. DJ's who love the hands-on nature of vinyl will appreciate the X1's hardware credentials, and not having to touch the computer mid-set.

Here four CD decks control the transport and track-seeking for four TRAKTOR SCRATCH PRO decks. But with two X1 units, adventurous DJs can also have deluxe hot-cue, loop and effects control for each deck! Everything is accessible from the X1's or CDJs, and DJ's won't have to touch the computer at all.

#### UNIVERSAL MIDI CONTROLLER

TRAKTOR KONTROL X1 not only features unique bi-directional hi-res communication with TRAKTOR, it also works perfectly as a standard MIDI controller for any other DJ and performance software such as Ableton Live™ or Serato Scratch Live™.
